Claims 1,3 and 4 rejected under 35 U.S.C. 103(a) as being unpatentable over Trentschi DD301044 optionally in view of LaFleur '054.

Trentsch discloses blends of thermoplastic elastomeric polyurethanes blended with SAN. The SAN of the examples has MW of 115,000 (abstract). Table 1 of the reference is believed to exemplify 90/10 mixing ratios of PU/SAN. The blend is useful as a melt spun fiber (see Derwent abstract). The MW of the polyurethane is not believed to be reported. However, the claimed range encompasses the conventional values. LaFleur (col 5 line 29) can be cited to confirm the typical MW of thermoplastic polyurethane elastomers. It would have been obvious to keep the Trentsch's polyurethane within normal MW values.

Applicant's arguments filed 8/4/06 have been fully considered but they are not persuasive.

Limiting the amount of styrenic polymer overcomes the previous rejection. The newly cited reference has an example at 10% SAN.

Arguments regarding dry spinning, wet spinning etc are irrelevant to the instant claims which allow for any spinning.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 1712

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
